## SUPPRESSORS

### WHISPER 9 CARBINE (9MM)

#### Whisper 9 Carbine: The PCC Suppressor Built for Accuracy and Abuse.

The **Whisperchicks Whisper 9 Carbine** is engineered for shooters who expect accuracy, reliability, and clean performance from a PCC suppressor. Designed specifically for carbines and fixed-barrel platforms, it requires no booster, keeping the system simple and dependable. Its advanced internal architecture manages gas flow to reduce blast, soften recoil impulse, and maintain smooth, consistent operation. Shot behavior stays predictable and repeatable, even during extended strings of fire.

#### Precision You Can Count On

The Whisper 9 Carbine maintains consistent point of impact through both slow fire and rapid strings. Its symmetrical baffle design minimizes shift, while reduced blast and controlled gas flow keep the system stable and easy to track. Follow-up shots stay fast and predictable, helping shooters keep rounds exactly where they want them.

#### Effective Sound Suppression

The Whisper 9 Carbine delivers up to 30 dB of sound reduction, significantly lowering report and improving overall shootability across both supersonic and subsonic ammunition. Its efficient gas management system helps control tone and reduce sharp blast, creating a smoother, more refined shooting experience. Whether at the range or in training, it keeps shooting enjoyable and predictable.

#### Full-Auto Rated. Built to Endure.

Built from 3D-printed titanium with a one-piece internal structure, the Whisper 9 Carbine is made to handle heat and high round counts. It remains stable and reliable under sustained fire, including full-auto use. Whether on the range or in demanding conditions, it delivers the durability PCC shooters expect.

#### 3D-Printed Titanium. Proven Durability.

Built from Ti64V ELI Grade 23 titanium, the Whisper 9 Carbine delivers long-term durability with excellent heat resistance. Its one-piece 3D-printed construction provides the internal volume needed for efficient gas control, resulting in stable, consistent performance under demanding conditions. Minor sparking may occur during initial use, which is normal for 3D-printed titanium suppressors.

#### Optimized Dimensions for PCC Platforms

At just 7 inches in length and weighing only 11 ounces, the Whisper 9 Carbine keeps PCC platforms fast, balanced, and easy to handle. Its 1.375" diameter allows it to fit under most 1.5" AR handguards, making it ideal for tucked or integrally styled builds. The result is strong performance without unnecessary bulk.

#### Why Choose the Whisper 9 Carbine?

- **Accurate:** Consistent point of impact with minimal POI shift, even during rapid fire.
- **Full-Auto Rated:** Built to handle heat and high round counts without compromise.
- **Quiet:** Up to 30 dB reduction with a smooth, controlled sound signature.
- **Durable:** 3D-printed Grade 23 titanium for long-term strength and heat resistance.
- **Cleaner Shooting:** Reduced blast and controlled gas flow for improved comfort and control.
- **PCC Optimized:** Purpose-built for carbines and fixed-barrel platforms. No booster required.
- **Lightweight:** Just 11 oz for fast handling and balanced setups.
- **Handguard Compatible:** 1.375" diameter fits under most 1.5" AR handguards.
- **Simple Mounting:** Direct thread design for secure attachment.
